

MODARTT releases 2 virtual vibraphones

Following the recent release of PIANOTEQ 3 and the Electric Pianos add-on, MODARTT is proud to present the Vibes add-on featuring two beautiful virtual vibraphones.

Using a newly extended model, PIANOTEQ can now reproduce the beautiful sound of the vibraphone. Two virtual vibraphones, V-M and V-B, are provided as embedded add-ons and included in the latest update of PIANOTEQ 3 for demo evaluation.

The V-M is a virtual copy of a Musser vibraphone that belongs to the famous French vibraphonist Dany Doriz. The V-B is a virtual copy of a Bergerault vibraphone that belongs to the Condorcet studio in Toulouse (France).

Thanks to the physical model the range of the vibraphones is extended from 3 to 5 octaves. Each instrument is provided with several variants and by using interface features, such as mallet hardness and tremolo, the user can customize them to his own taste.
